Write short notes on:

**PART A**

1. What are the major anatomic structures of the limbic system? What are their functions? In what way it is implicated in schizophrenia?  

2. What do you understand by psycho-neuro-endocrine system? Describe the causation of depression on the basis of this system.  

3. What are cluster ‘C’ personality disorders and their characteristic features? How can they be distinguished from one another?  

5. Define declarative memory. What is the neuronal basis of it?
