

Applied Materials Sample Paper Questions

Q1. The roller-coaster car has a speed of 15 ft/s when it is at the crest of a vertical parabolic track. Compute the velocity and the normal force it exerts on the track when it reaches point B. Neglect friction and the mass of the wheels. The total weight of the car and the passengers is 350 lb.

- a) $v_B = 114.5$ ft/s, $N_B = 29.1$ lb
- b) $v_B = 114.5$ ft/s, $N_B = 284$ lb
- c) $v_B = 114.5$ ft/s, $N_B = 156.5$ lb
- d) $v_B = 114.5$ ft/s, $N_B = 440$ lb

ANS: a

Q2. The block A having a weight of 1.5 lb slides on the smooth horizontal slot. If the block is drawn back so that $s = 0$. Each of the two springs has a stiffness of $k = 150$ lb/ft and an unscratched length of 0.5 ft.

- a) $v_A = 106.2$ ft/s
- b) $v_A = 120.4$ ft/s
- c) $v_A = 160.5$ ft/s
- d) $v_A = 107.7$ ft/s

ANS: a

Q3. The purpose of jigs and fixtures are to

- a) Increased production rate
- b) Increased machining accuracy
- c) Facilitate interchangeable manufacturing
- d) Enable employ less skilled operators
- e) All of the above

ANS: e

Q4. Pick up the wrong statement? A refrigerant should have

- a) Low specific heat of liquid
- b) High boiling point
- c) High latent heat of vaporization
- d) Higher critical temperature
- e) Low specific volume of vapor

ANS: b

Q5. Nodular iron has

- a) High machinability
- b) Low melting point
- c) High tensile strength
- d) Good fluidity
- e) All of the above

ANS: e

Q6. The property of a material which enable it to resist fracture due to high impact loads is known as

- a) Elasticity
- b) Endurance
- c) Strength
- d) Toughness
- e) Resilience

ANS: d

Q7. A car having a mass of 2 Mg strikes a smooth, rigid sign post with an initial speed of 30 km/h. To stop the car, the front end horizontally deforms 0.2 m. If the car is free to roll during the collision, determine the average horizontal collision force causing the deformation.

- a) $F_{avg} = 9000 \text{ kN}$
- b) $F_{avg} = 4500 \text{ kN}$
- c) $F_{avg} = 347 \text{ kN}$
- d) $F_{avg} = 694 \text{ kN}$

ANS: c

Q8. The block has a weight of 1.5 lb and slides along the smooth chute AB. It is released from rest at A, which has coordinates of A (5 ft, 0, 10 ft). Determine the speed at which it slides off at B, which has coordinates of B (0, 8 ft, 0).

- a) $v_B = 28.7 \text{ ft/s}$
- b) $v_B = 25.4 \text{ ft/s}$
- c) $v_B = 26.8 \text{ ft/s}$
- d) $v_B = 29.8 \text{ ft/s}$

ANS: b

Q9. The elevator E and its freight have a total mass of 400 kg. Hoisting is provided by the motor M and the 60-kg block C. If the motor has an efficiency of $e = 0.6$, determine the power that must be supplied to the motor when the elevator is hoisted upward at a constant speed of $v_E = \text{m/s}$.

- a) $P = 22.2 \text{ kW}$
- b) $P = 13.34 \text{ kW}$
- c) $P = 26.2 \text{ kW}$
- d) $P = 30.1 \text{ kW}$

ANS: a

Q10. When at A the bicyclist has a speed of $v_A = \text{ft/s}$. If he coasts without pedaling from the top of the hill at A to the shore of B and then leaps off the shore, determine his

speed at B and the distance x where he strikes the water at C. The rider and his bicycle have a total weight of 150 lb. Neglect the size of the bicycle and wind resistance.

- a) $v_B = 35.0$ ft/s, $x = 41.2$ ft
- b) $v_B = 35.0$ ft/s, $x = 36.1$ ft
- c) $v_B = 40.1$ ft/s, $x = 46.5$ ft
- d) $v_B = 40.1$ ft/s, $x = 52.0$ ft

ANS: a

Q11. Spring index is

- a) Ratio of coil diameter to wire diameter
- b) Load required to produce unit deflection
- c) Its capability of storing energy
- d) Indication of quality of spring
- e) Nothing

ANS: a

Q12. A feeler gauge is used to check

- a) Radius
- b) Screw pitch
- c) Surface roughness
- d) Unsymmetrical shape
- e) Thickness of clearance

ANS: e

Q13. The firing mechanism of a pinball machine consists of a plunger P having a mass of 0.25 kg and a spring of stiffness $k = 300$ N/m. When $s = 0$, the spring is compressed 50 mm. If the arm is pulled back such that $s = 100$ mm and released, determine the speed of the 0.3 kg pinball B just before the plunger strikes the stop, i.e., $s = 0$. Assume

all surfaces of contact to be smooth. The ball moves in the horizontal plane. Note that the ball slides without rolling.

- a) $v = 4.47 \text{ m/s}$
- b) $v = 3.30 \text{ m/s}$
- c) $v = 2.34 \text{ m/s}$
- d) $v = 3.16 \text{ m/s}$

ANS: b

Q14. A motor hoists a 50-kg crate at constant speed to a height of $h = 6 \text{ m}$ in 3 s. If the indicated power of the motor is 4 kw, determine the motors efficiency.

- a) $e = 0.025 (2.5\%)$
- b) $e = 0.245 (24.5\%)$
- c) $e = 0.736 (73.6\%)$
- d) $e = 0.05 (5.0\%)$

ANS: b

Q15. Tool life of the cutting tool is most affected by

- a) Cutting speed
- b) Tool geometry
- c) Cutting feed and depth
- d) Micro structure of material being cut
- e) Not using coolant and lubricant

ANS: a

Q16. Which one of the following methods produces gear by generating process

- a) Hobbing
- b) Casting
- c) Punching

- d) Milling
- e) Broaching

ANS: a

Q17. The coefficient of friction between the 2-lb block and the surface is $\mu = 0.2$. The block is acted upon by a horizontal force of P . Determine the maximum deformation of the outer spring B at the instant the block comes to rest. Spring B has a stiffness of $K_B = 20$ lb/ft and the nested spring C has a stiffness of $k_C = 40$ lb/ft.

- a) $x_B = 1.154$ ft
- b) $x_B = 0.790$ ft
- c) $x_B = 0.923$ ft
- d) $x_B = 1.137$ ft

ANS: d

Q18. Metal in machining operation is removed by

- a) Tearing chips
- b) Distortion of metal
- c) Shearing the metal across a zone
- d) Cutting the metal across a zone
- e) Pushing the metal with tool

ANS: c

Q19. A truck has a weight of 25,000 lb and an engine which transmits a power of 350 hp. Assuming that the wheels do not slip on the ground, determine the angle of the largest incline the truck can climb at a constant speed of $v = 50$ ft/s.

- a) $\theta = 8.86^\circ$
- b) $\theta = 24.3^\circ$
- c) $\theta = 8.75^\circ$
- d) $\theta = 26.8^\circ$

ANS: a
